Emory Investment Management manages nearly $7 billion of diversified investments for Emory University, Emory Healthcare, and The Carter Center.

Emory University

Located in the city of Atlanta and encompassing two million square feet of scientific research space, the top-ranked Emory University is internationally recognized for its liberal arts colleges, and graduate and professional schools. The Georgia-based private institution is the educational platform for over 15,000 students and directly and indirectly supports 77,400 statewide jobs. In fiscal year 2018, Emory University awarded $297 million in grants and scholarships to students and was awarded $734 million in total research funding. Emory University fosters a community of volunteers whose work expands beyond the Atlanta neighborhood, with five in six students participating in community service activities.

Emory Healthcare

Emory Healthcare is the most comprehensive health system in Georgia, with over 72,000 hospital admissions and 4.5 million outpatient service visits annually. Emory Healthcare is part of Emory University’s Woodruff Health Sciences Center along with Emory’s School of Medicine, Emory’s Global Health Institute, Nell Hodgson Woodruff School of Nursing, Rollins School of Public Health, Winship Cancer Institute, and Yerkes National Primate Research Center. Emory is also engaged in a number of research contracts and consulting partnerships with the Centers for Disease Control and Prevention (CDC) with a primary focus on disease identification, aversion, and prevention.

The Carter Center

In 1982, former US President Jimmy Carter and former First Lady Rosalynn Carter set out to establish The Carter Center, a nongovernmental organization committed to defending human rights and alleviating human suffering. They chose to partner with Emory University due to the institution’s shared values, unique resources, and open platform for idea exchange. Since inception, The Carter Center has established peace programs in the developing world focusing on conflict resolution, democracy, human rights, and global access to information and health programs focusing on eradicating or controlling neglected diseases in Hispaniola, improving maternal and child health in Sudan and Nigeria, and improving access to mental health care globally.

Nearly 25% of Georgia physicians have trained at Emory
**Drug Discovery**

- **Emtriva and 3TC**: More than 9/10 HIV patients in the US on lifesaving therapy take these drugs.
- **Obizur**: Helps blood clot in an emergency for patients with acquired hemophilia A.

**Medical Breakthroughs**

- **The Emory Cardiac Toolbox™**: A cardiac imaging system used to treat 4 million+ patients annually worldwide.
- **Belatacept**: An improved system to help the body accept a new kidney.
- **Eye-tracking technologies that identify markers of autism by the 6th month of life**.
- **A simple test to identify people at risk for cognitive decline and the ability to predict Alzheimer’s 3-6 years before symptoms appear**.
- **A simple single-use test that provides an accurate anemia reading**.
- **A discovery about T-cell behavior toward viral infections has led to important discoveries about how cancer cells mirror this interaction in order to stop T-cells from fighting them off**.

**Rankings**

1. Hospital in Georgia and metro Atlanta
2. Department of Biomedical Engineering (partnership with Georgia Tech)
3. Nell Hodgson Woodruff School of Nursing
4. Goizueta Business School: Full-time MBA
5. For Economic Diversity of Students
6. Best college for veterans
7. Among National Public and Private Universities
